

# The Inverse Reflection Principle

The points  $(a, b)$  and  $(b, a)$  in the coordinate plane are symmetric with respect to the line  $y = x$ . The points  $(a, b)$  and  $(b, a)$  are **reflections** of each other across the line  $y = x$ .

The graph of  $f$ .

The mirror  $y = x$ .

The reflection.

The graph of  $f^{-1}$ .

**FIGURE 1.69** The Mirror Method. The graph of  $f$  is reflected in an imaginary mirror along the line  $y = x$  to produce the graph of  $f^{-1}$ . (Example 5)

## The Inverse Composition Rule

A function  $f$  is one-to-one with inverse function  $g$  if and only if

$f(g(x)) = x$  for every  $x$  in the domain of  $g$ , and

$g(f(x)) = x$  for every  $x$  in the domain of  $f$ .

### Verifying Inverse Functions

Show algebraically that  $f(x) = x^3 + 1$  and  $g(x) = \sqrt[3]{x - 1}$  are inverse functions.

The graph of  $y = x^2$  (not one-to-one).

The inverse relation of  
 $y = x^2$  (not a function).

The graph of  $y = \sqrt{x}$  (a function).

The graph of the function  
whose inverse is  $y = \sqrt{x}$ .

**FIGURE 1.70** The function  $y = x^2$  has no inverse function, but  $y = \sqrt{x}$  is the inverse function of  $y = x^2$  on the restricted domain  $[0, \infty)$ .

## How to Find an Inverse Function Algebraically

Given a formula for a function  $f$ , proceed as follows to find a formula for  $f^{-1}$ .

1. Determine that there is a function  $f^{-1}$  by checking that  $f$  is one-to-one. State any restrictions on the domain of  $f$ . (Note that it might be necessary to impose some to get a one-to-one version of  $f$ .)
2. Switch  $x$  and  $y$  in the formula  $y = f(x)$ .
3. Solve for  $y$  to get the formula  $y = f^{-1}(x)$ . State any restrictions on the domain of  $f^{-1}$ .

## Finding an Inverse Function

Show that  $f(x) = \sqrt{x+3}$  has an inverse function and find a rule for  $f^{-1}(x)$ . State any restrictions on the domains of  $f$  and  $f^{-1}$ .
