| Standard Set 3.0 | Students know the Pythagorean theorem and deepen their <br> understanding of plane and solid geometric shapes by constructing <br> figures that meet given conditions and by identifying attributes of <br> figures: |
| :--- | :--- |
| 3.2 | Understand and use coordinate graphs to plot simple figures, determine <br> lengths and areas related to them, and determine their image under <br> translations and reflections. |
| 3.3 | Know and understand the Pythagorean theorem and its converse and use it <br> to find the length of the missing side of a right triangle and the lengths of <br> other line segments and, in some situations, empirically verify the <br> Pythagorean theorem by direct measurement. |
| 3.4 | Demonstrate an understanding of conditions that indicate two geometrical <br> figures are congruent and what congruence means about the relationships <br> between the sides and angles of the two figures. |
